This trap is an upgraded version of the model 512. Dip switches allow the user to program fan and battery operation. It also includes an integrated photo cell switch. This trap and stand combination is used for single night collections as a quick, all-in-one setup surveillance tool (instead of hanging the trap on a tree). If attractants are desired, they can easily be integrated into the trap.

**Battery (1 gel cell)**.....\$22.06 each

6 Volt 12.0 Amp. Hr.
